Best practice ¹

Assessment of mental status

Assessment of delirium

Identify:

- Factors that cause distress
- Actions to calm person if agitated

The reality

The problem?

**TOP
PRIORITY**

**Implementation
strategies**

**Audit &
feedback**

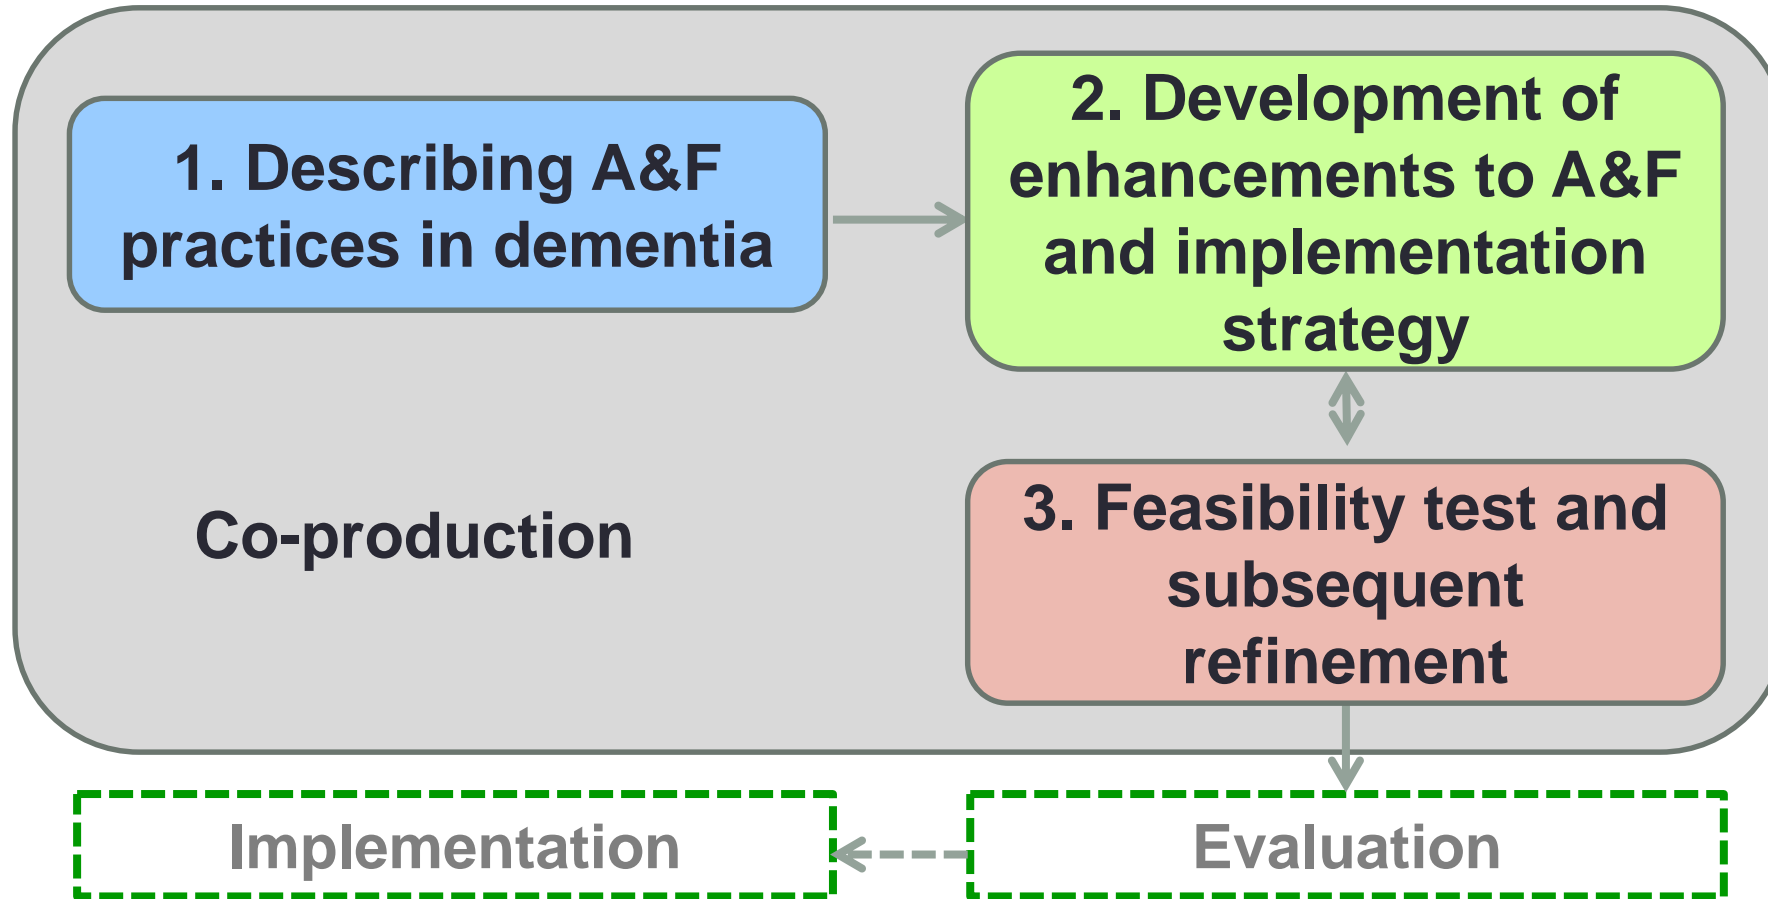

Audit and feedback:

Audit and feedback (A&F) involves providing a recipient with a summary of their performance over a specified period of time

Effective: 4.3% absolute improvement

...but variable: IQR = 0.5% to 16% (Ivers et al, 2012)

Enhancing audit and feedback in acute Trust dementia care

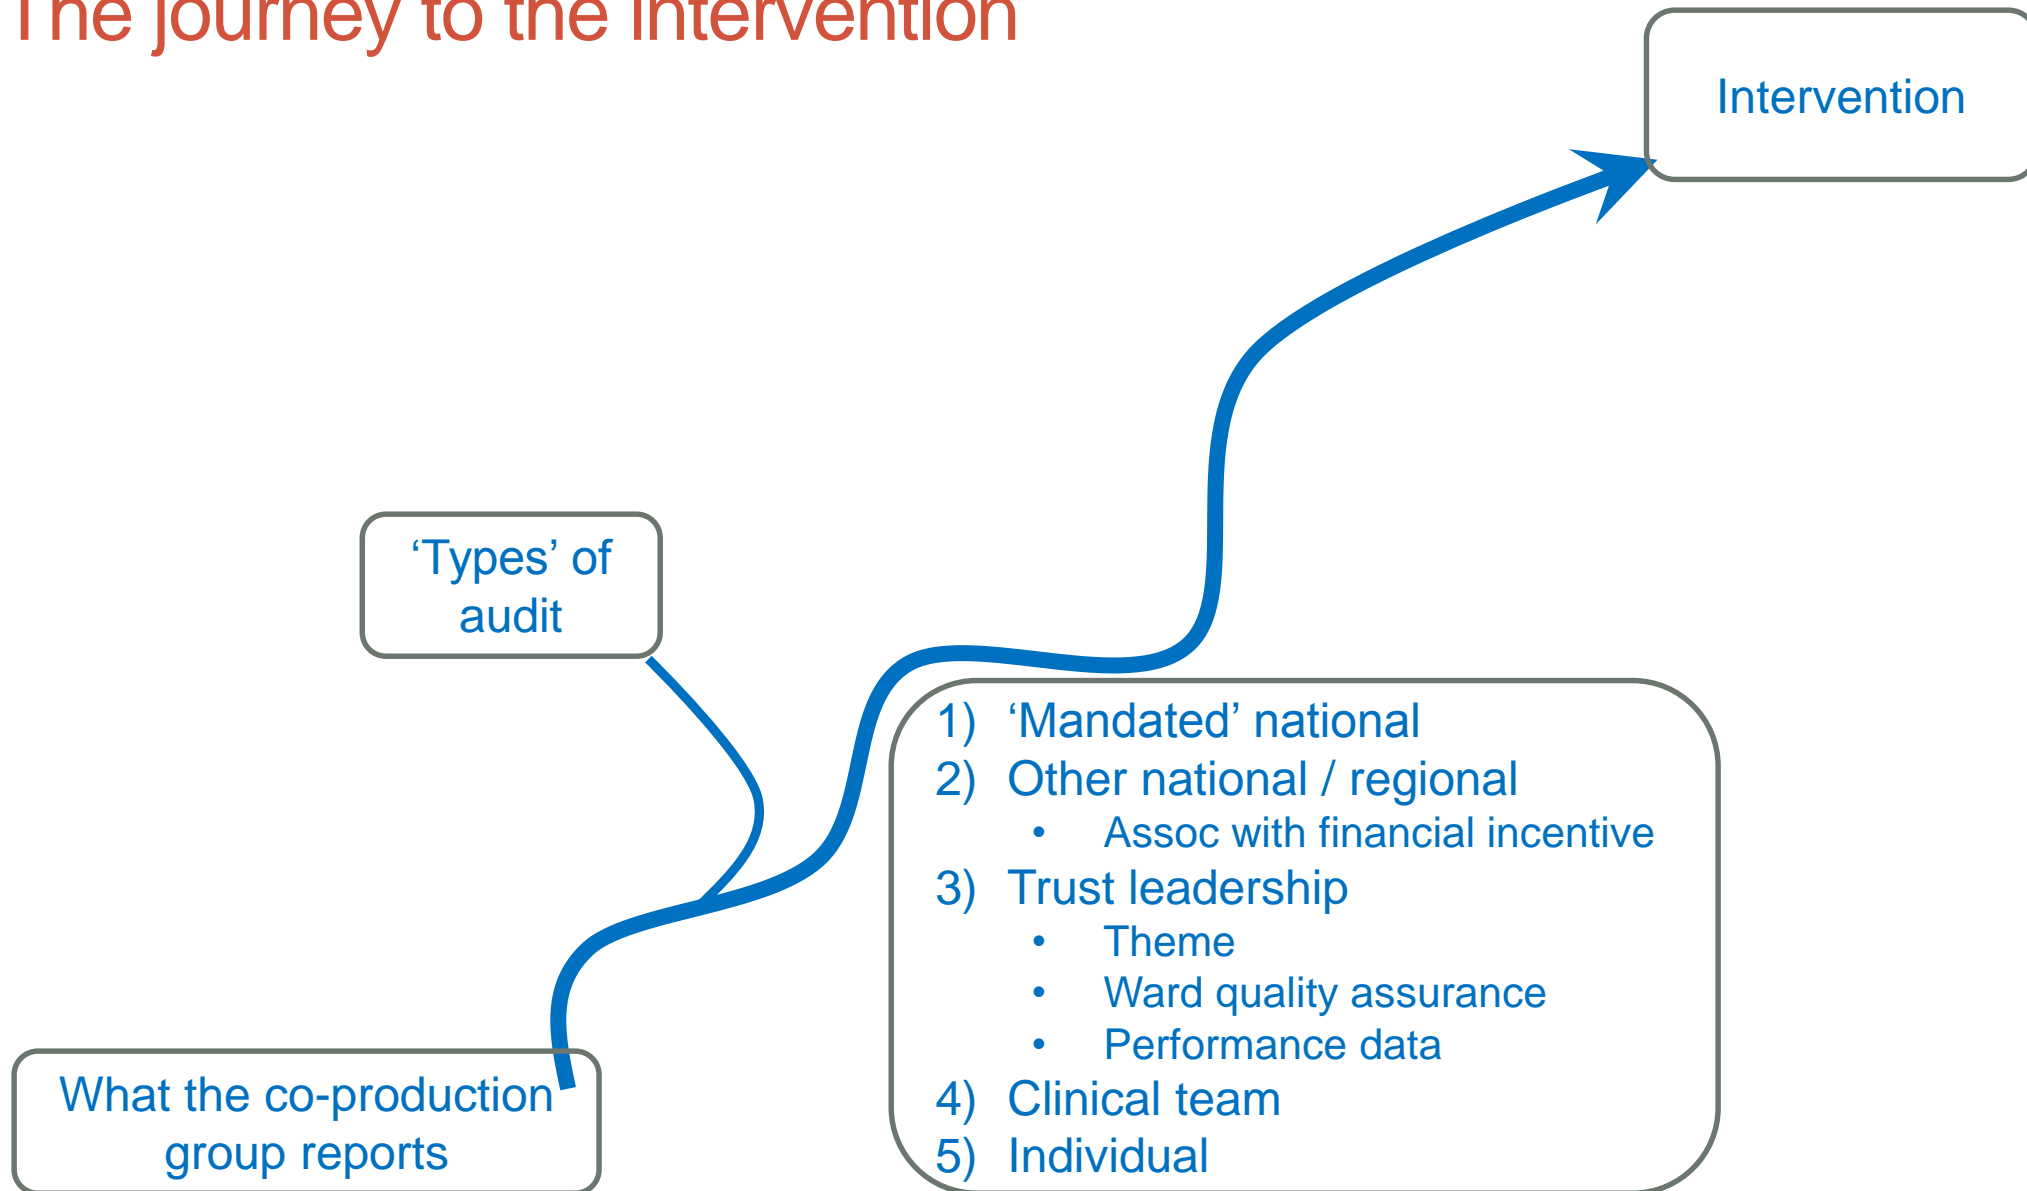

1. Describing A&F practices in dementia

Co-production

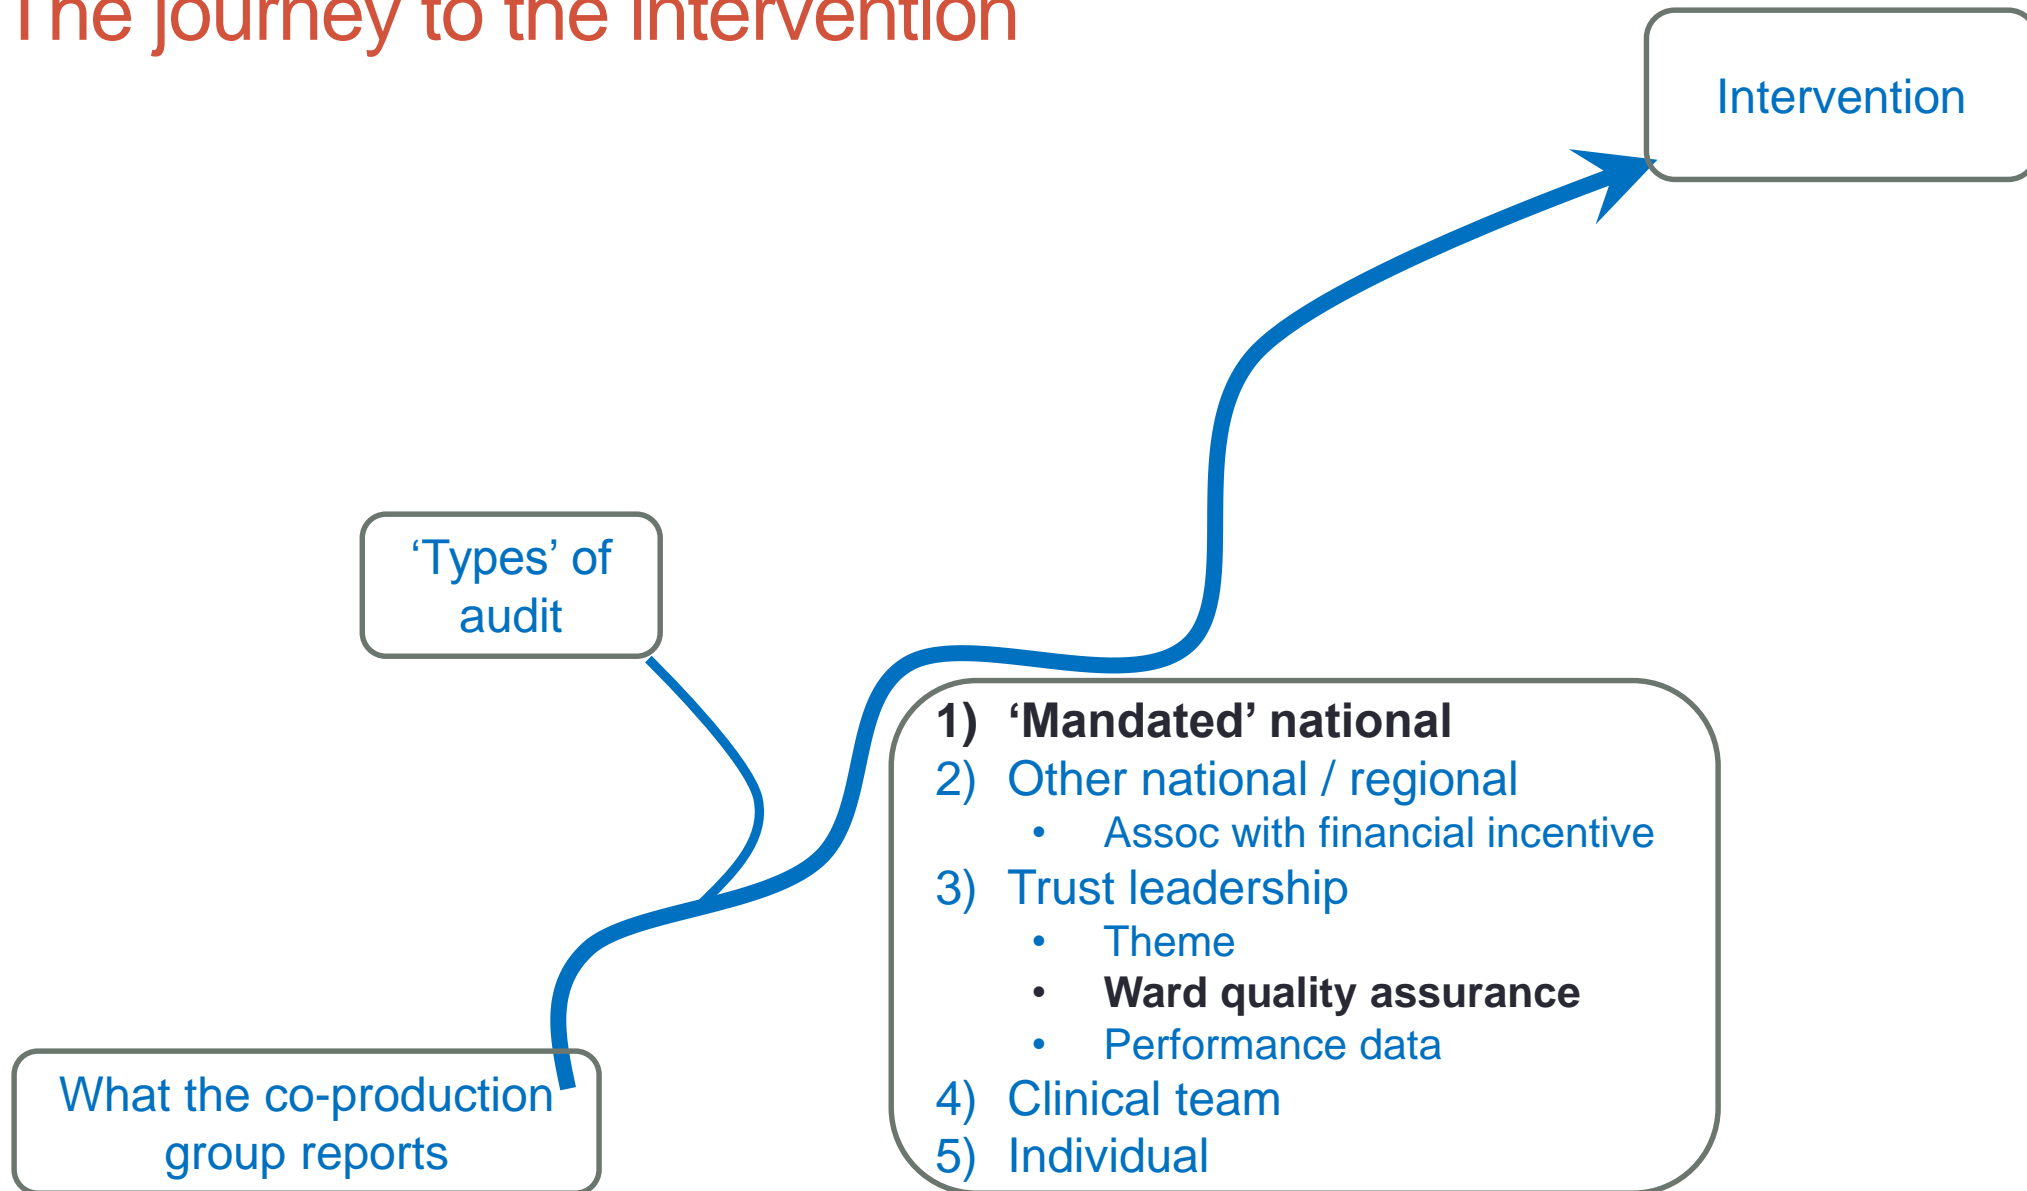

Phase 1 - Description

- 32 semi-structured interviews
 - 36 observations
 - 39 documents analysed
-
- Framework analysis
 - Iterative presentation to co-production group for challenge and synthesis

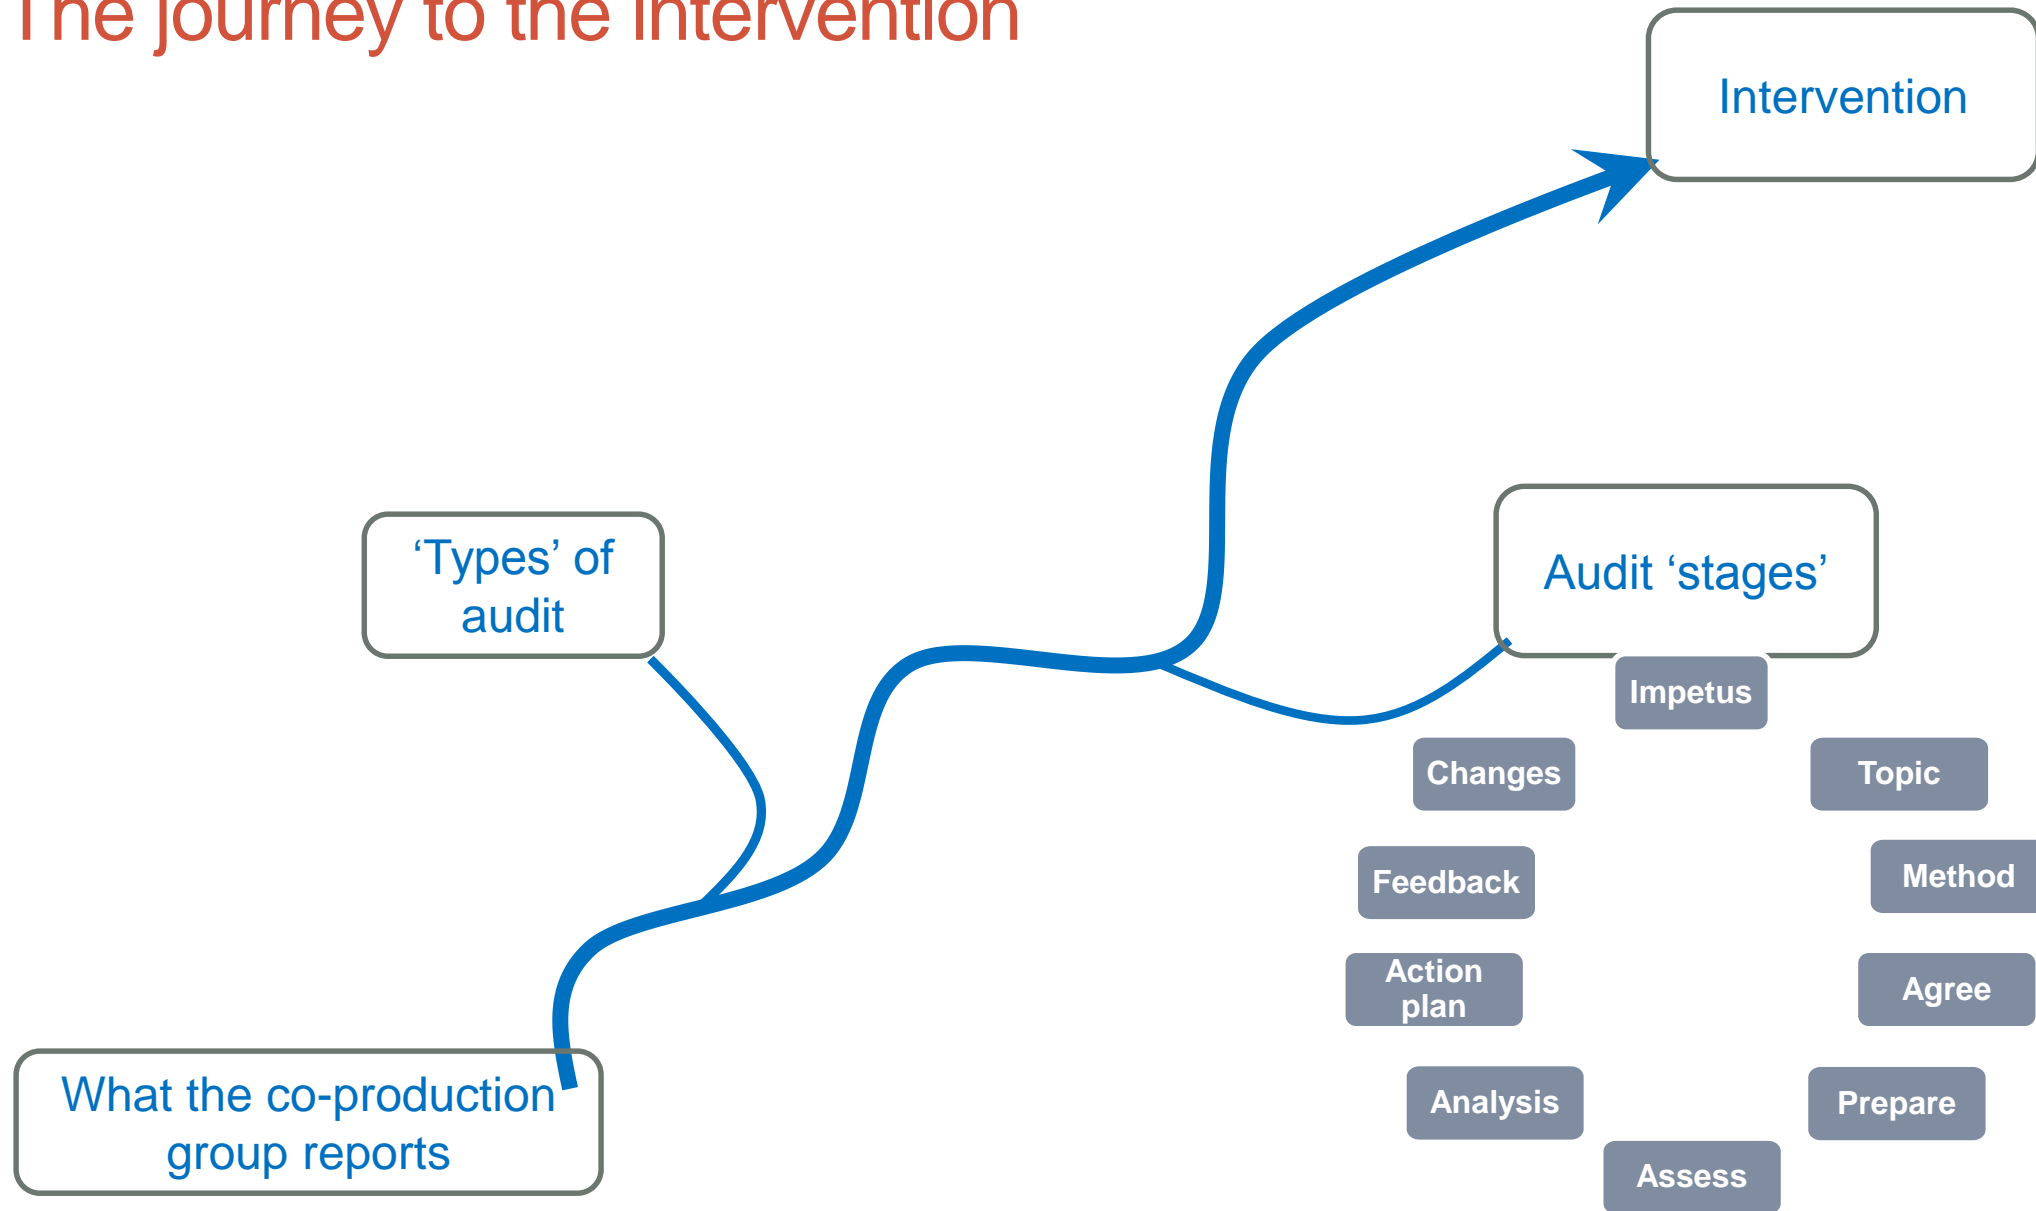

The journey to the intervention

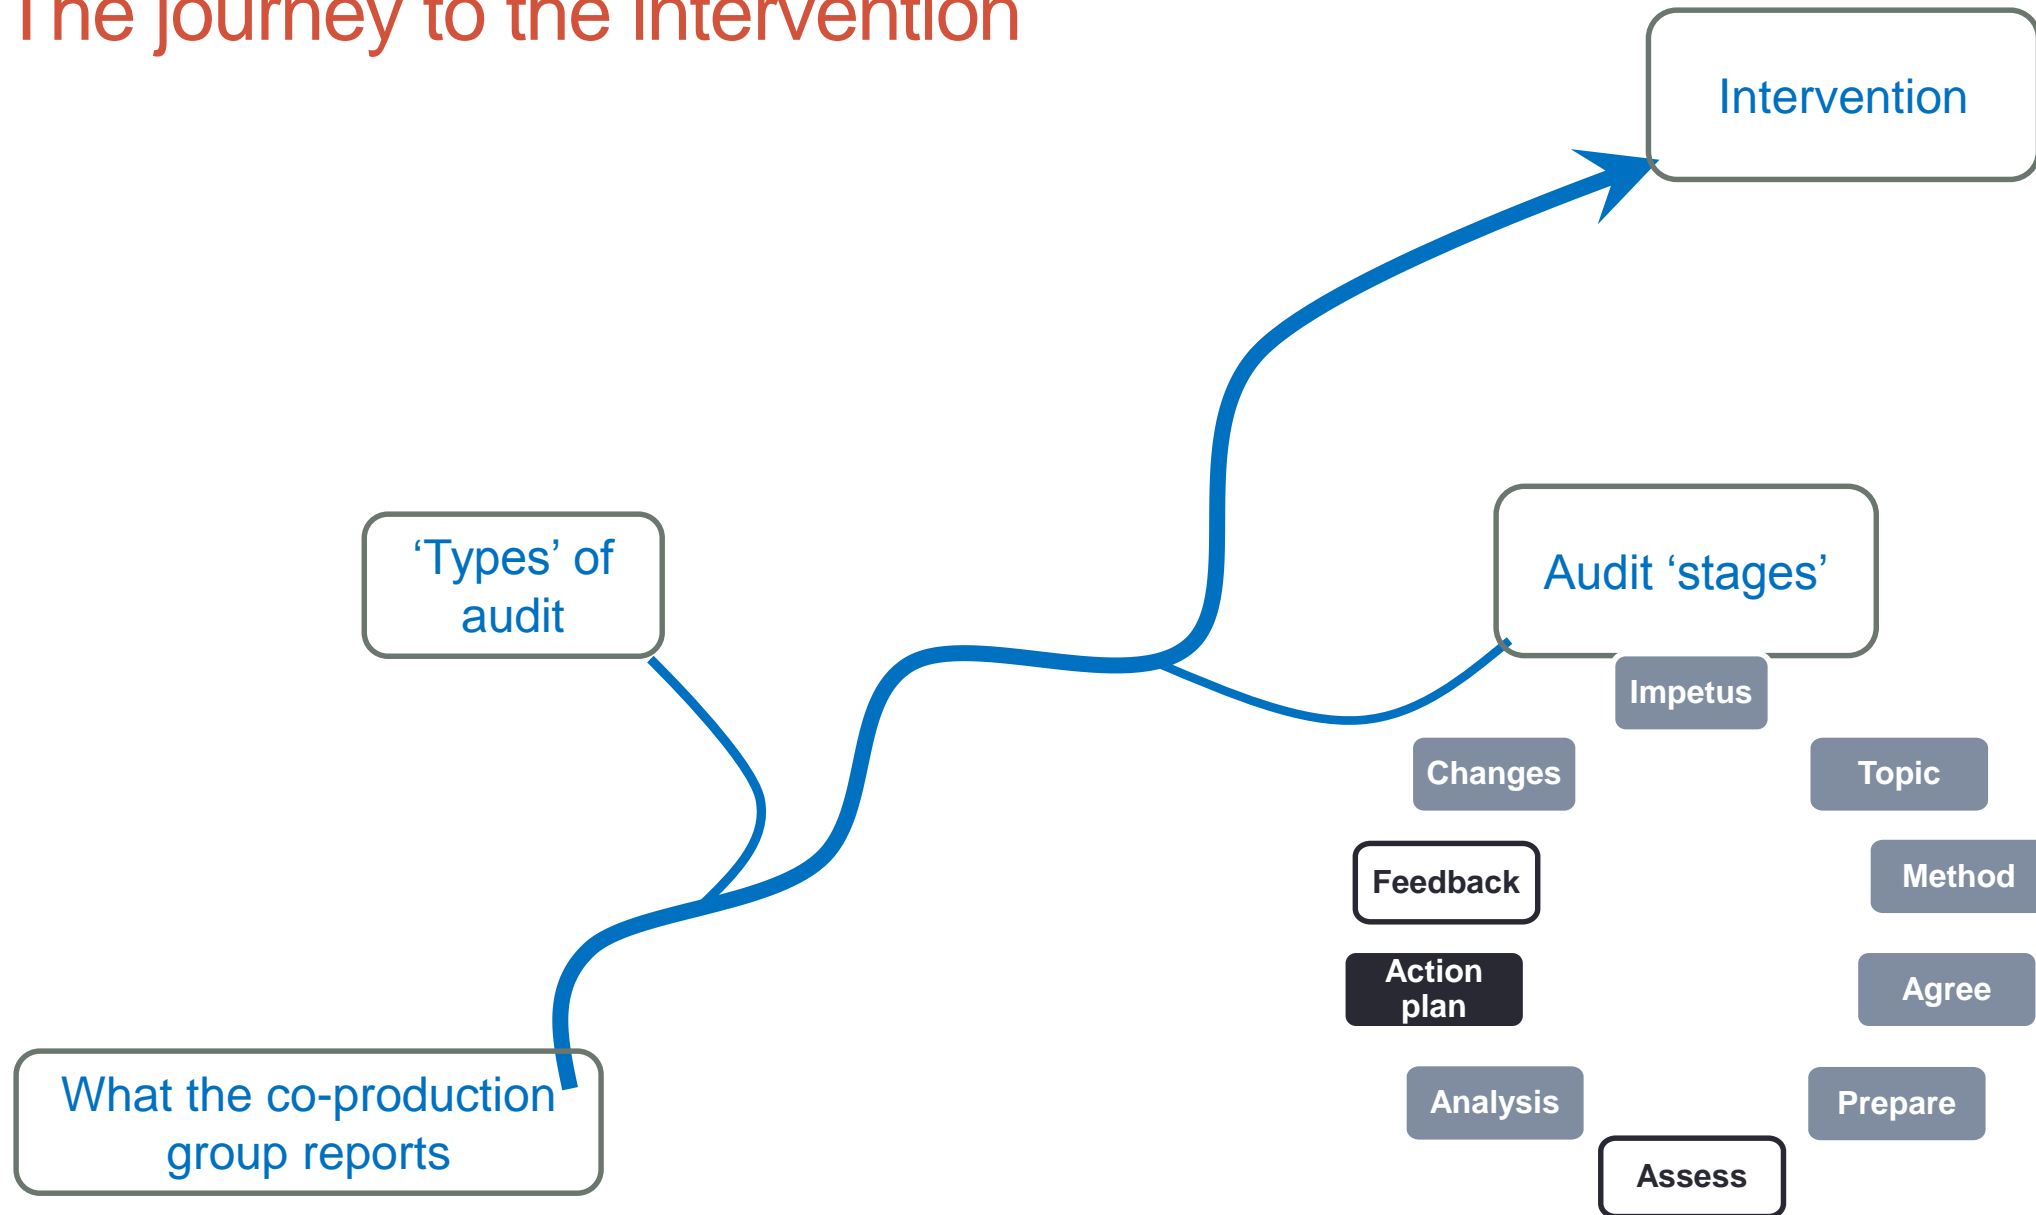

The journey to the intervention

Enhancing audit and feedback in acute Trust dementia care

Enhancements (Colquhoun et al, 2017)

(discussing specification & implementation):

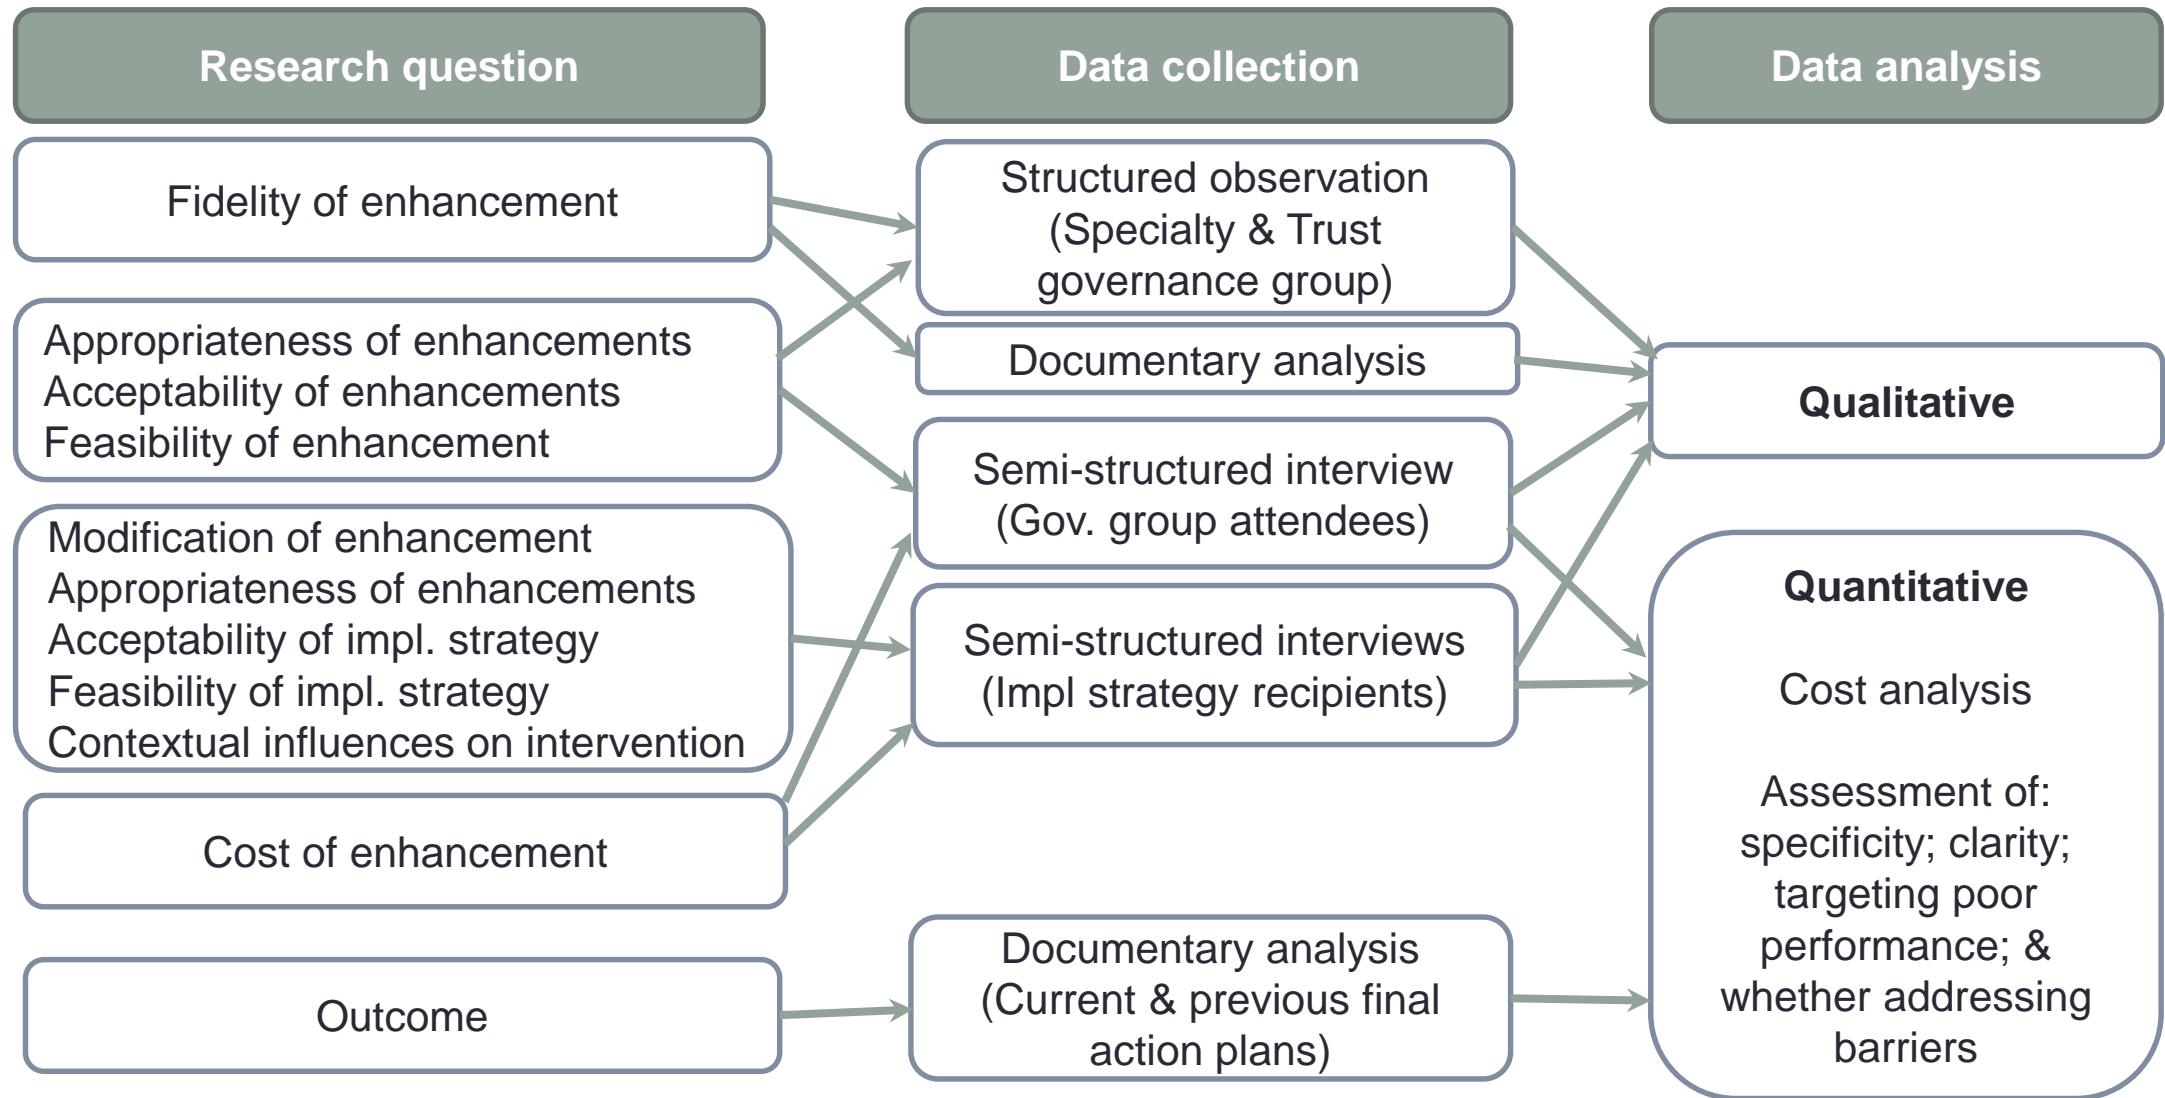

1. From national priorities to 'low baseline'
2. Support committee sense-making:
 - Target message to recipient & local priorities
 - Address trust and credibility
 - Present comparison (*national, self, peer (Gude et al, 2019)*)
 - Present loss-framed data (*e.g. 40% patients did NOT get...*)
3. Link actions to results:
 - Identify the barriers to target care behaviour
 - Model the link between barrier and action
4. Adapt existing actions

Implementation strategy

Informed by Normalisation Process Theory
(May & Finch, 2009)

Enhancing audit and feedback in acute Trust dementia care – Exploring feasibility (draft)
