Guidé par la compassion.

About the KRC

The Kidney Research Centre (KRC) was established in 2000 at The Ottawa Hospital Research Institute, University of Ottawa, and is the first centre of its kind in Canada devoted exclusively to the prevention, diagnosis and treatment of kidney disease. The KRC team consists of laboratory scientists, clinician investigators, students and research trainees, technologists, research coordinators, research managers, and clerical and administrative staff. Since 2000, the KRC has experienced significant growth in the size of its team of researchers, and in the scope of the research being conducted.

Cover: Image shows the interaction between tiny pieces of injured kidney cells known as microparticles (seen in green) with kidney tubule cells (seen in red with blue nuclei). The laboratory of Dr. Dylan Burger recently published the first evidence that these microparticles can damage kidney tubules leading to fibrosis (kidney scarring). This newly discovered process may play a key role in kidney failure. Dr. Burger's work can be accessed at <https://doi.org/10.1080/20013078.2018.1432206>

Message from the Director

Academic Year 2017-2018

Every year, more than 3,000 people in Ontario are diagnosed with kidney failure, a number that has risen progressively over the past 3 decades. Once kidney failure is established, treatment options are limited, and include life-long dialysis treatments or kidney transplantation. And while transplant is a preferred treatment, many patients do not have a living kidney donor, and must sustain difficult and costly dialysis treatments for an average of 4 years before a kidney becomes available from a deceased donor. Indeed, some people do not survive long enough to receive a kidney transplant, and many others are not eligible for this surgery because of the fragile state of their health. Here at the Kidney Research Centre, we are dedicated to finding innovative solutions to prevent, diagnose and treat kidney disease. Our goal is to enhance the quality of life for people affected by all forms of kidney disease. And in 2017-18, we made steady progress, both at the laboratory bench and in the hospital and out-patient clinics.

In 2017-18, researchers at the KRC published more than 60 peer-reviewed manuscripts in scientific/medical journals, and presented their findings at local, national and international meetings. At the laboratory level, advances were made by Drs. Chris Kennedy and Richard Hébert in understanding how diabetes damages the tiny filters of the kidneys ("glomeruli") and alters the transport of salt and water by kidney tubules. Dr. Dylan Burger's laboratory has discovered the damaging

Dr. Kevin Burns, Director of the Kidney Research Centre

effects of small vesicles released by blood vessel cells ('microparticles') in diabetes, which could lead to new strategies to treat vascular disease in these patients. On the clinic side, there have been several important research developments, including understanding the place of anticoagulant medications to prevent stroke for people on dialysis (Dr. Manish Sood), ways to increase kidney donation rates and improve transplant outcomes (Dr. Greg Knoll), a link between results of newborn blood tests and risk of kidney disease in children (Dr. Sood), and the connection between high blood pressure and risk of kidney failure (Drs. Sood, Marcel Ruzicka, Swapnil Hiremath, Ayub Akbari, Deb Zimmerman and Brendan McCormick), amongst many others. These advances are also highlighted in our monthly newsletter, the KRC Newsflash (www.ohri.ca/centres/krc/newsflash.asp).

The KRC has been very successful once again in securing major provincial and national grant funding. Dr. Dylan Burger received a prestigious Early Researcher Award from the Government of Ontario (Ministry of Research, Innovation and Science) to support his studies on the effects of circulating microparticles in causing injury to blood vessels and kidney cells in diabetes. Dr. Burger was the sole recipient of this award at the OHRI, which attests to the importance and high quality of his research. Dr. Kevin Burns was awarded a 5-year grant from the Canadian Institutes of Health Research (CIHR) to continue his research on cell-based treatments for acute kidney failure. Dr. Burns and his group have shown that in animals with sudden kidney failure, intravenous administration of tiny vesicles ("exosomes") isolated from human cord blood "progenitor" cells significantly protects against kidney injury and allows for more rapid recovery. With this grant, his lab hopes to uncover the

mechanisms in which these exosomes protect the kidneys, and then transfer this technology for use in humans with kidney failure in the near future. On the clinical side, Dr. Zimmerman was awarded a grant from the CIHR to launch a clinical trial focused on the effects of exercise on quality of life in patients on dialysis treatments. Funding for this important study was granted after a tough competition in which only 1 out of 10 applications was successful. Dr. Ayub Akbari received a grant from the Kidney Foundation of Canada to study why some people with advanced kidney disease must start dialysis treatments urgently, without time for planning or assistance with decision-making. Dr. Edward Clark was awarded funding from the Ontario Renal Network (ORN) to study the factors that lead to recovery of kidney function in patients with acute kidney failure on dialysis, and Dr. Manish Sood also received a grant from ORN, to improve understanding of end-of-life decisions and “do-not-resuscitate” status in patients on hemodialysis. Dr. Swapnil Hiremath was granted funding from the Lotte and John Hecht Memorial Foundation to support his research on the effects of dietary potassium supplementation on high blood pressure, a major risk factor for kidney disease.

Graduate students at the KRC successfully defended their theses in 2017-18: Ms. Maddison Turner (Dr. Burger’s lab), and Ms. Randa Haneef (Dr. Burns’ lab) each received their MSc degrees from the University of Ottawa for their research accomplishments. Ms. Naomi Boisvert (Dr. Kennedy’s lab) was awarded the Doctorate (PhD) degree for her research study on “The role of ubiquitin C-terminal hydrolase-1 in renal function and glomerular disease”.

We receive tremendous support from the Ottawa community. The 34th La Serata Italiana/Italian Night gala dinner on March 3rd, 2018 featured a

“Night at the Opera” and raised \$50,000 for the KRC. We thank Anna Monteduro, Mario Frangione, and all members of the Italian Night organizing committee for hosting this great gala, as well as The Ottawa Hospital (TOH) Foundation for their assistance and support. At the dinner, KRC graduate student Matthew Spence (Dr. K. Burns’ lab) and Nephrology Fellowship trainee Dr. David Massicotte-Azarniouch (supervisor Dr. M. Sood) were awarded KRC scholarships, sponsored by the Italian Night and the Kidney Foundation of Canada. Mr. Spence has been studying the ways in which exosomes from cord blood progenitor cells are able to selectively target the injured kidneys (and not other organs) to exert their beneficial effects. Dr. Massicotte-Azarniouch is interested in a condition called “ANCA vasculitis”, which can cause sudden kidney failure. He will conduct research to potentially uncover the risk factors for this debilitating disease, as well as the optimal treatments. The KRC scholarships support the training of these excellent students and fund their attendance and presentations at national and international meetings.

More than \$4,500 was raised to support the KRC at the 8th annual Alive to Strive Kidney Fitness Project event on April 29, 2018. The event involved runners and walkers from all age groups, and included patients and their family members. Many thanks to Ms. Marie-Eve Chainey, Chair of the event, Dr. Zimmerman, and all committee members for their hard work and dedication to this important cause.

On September 18, 2017 the 14th Annual KRC Golf Tournament at The Meadows course attracted more than 130 golfers, and raised \$30,000 to support kidney research. Our guest speaker for the evening, Ms. Marie-Eve Chainey shared her experience as a kidney transplant recipient. Organization of the event was led once again by

Mr. Sam Karkache, his committee of volunteers, and TOH Foundation. We thank Sam and all committee members, our Honorary Chair-hockey legend Brian Kilrea, Dean Roberts from TSN 1200, Michael O’Byrne, Urbandale, the CLV Group, and all participants and sponsors.

Lastly, we are very grateful for our private donors, who have made major donations to the KRC in the past year that will go directly to support biomedical and clinical research projects. We also thank the trainees, research staff, our lab manager Ms. Gaby Cherton-Horvat, and administrative staff (Ms. Brittany Hollingsworth and Ms. Jennifer Brownrigg) for their contributions to another successful year of research at KRC. I hope you enjoy reading about the achievements over the past year, including a special feature on one of our lead scientists, Dr. Richard Hébert!

Sincerely,

Kevin D. Burns MD CM, FRCPC
Professor of Medicine, Division of Nephrology,
Dept. of Medicine
The Ottawa Hospital
Director, Kidney Research Centre
Chronic Disease Program
Ottawa Hospital Research Institute, University of Ottawa

Message du directeur

Année scolaire 2017-2018

Dr Kevin Burns, Directeur du Centre de recherche sur les maladies du rein.

Chaque année, plus de 3 000 personnes en Ontario reçoivent un diagnostic d’insuffisance rénale, un nombre qui a augmenté progressivement au cours des trois dernières décennies. Une fois l’insuffisance rénale établie, les options de traitement sont limitées et comprennent des traitements de dialyse à vie ou une greffe de rein. Et bien que la greffe soit un traitement de choix, de nombreux patients n’ont pas de donneur vivant pour le rein et doivent subir des traitements de dialyse difficiles et coûteux pendant 4 ans en moyenne avant que le rein d’un donneur décédé ne soit disponible. En effet, certaines personnes ne survivent pas assez longtemps pour recevoir une greffe de rein, et beaucoup d’autres ne sont pas admissibles à cette chirurgie en raison de leur état de santé fragile. Ici, au Centre de recherche sur les maladies du rein, nous nous engageons à trouver des solutions innovantes pour prévenir, diagnostiquer et traiter les maladies du rein. Notre objectif est d’améliorer la qualité de vie des personnes touchées par toutes les formes d’insuffisance rénale. Et en 2017-18, nous avons fait des progrès constants, à la fois au laboratoire, à l’hôpital et dans des cliniques externes.

En 2017-18, les chercheurs du CRMR ont publié plus de 60 manuscrits évalués par des pairs dans des revues scientifiques/médicales et présenté leurs conclusions lors de réunions locales, nationales et internationales. Au niveau des laboratoires, les progrès ont été réalisés par les Drs Chris Kennedy et Richard Hébert comprennent comment le diabète endommage les minuscules filtres des

reins (« glomérules ») et modifie le transport du sel et de l'eau par les tubules rénaux. Le laboratoire du Dr Dylan Burger a découvert les effets néfastes des petites vésicules libérées par les cellules des vaisseaux sanguins (« microparticules ») dans le diabète, ce qui pourrait donner lieu à de nouvelles stratégies pour traiter les maladies vasculaires chez ces patients. En ce qui concerne les chercheurs en cliniques, plusieurs recherches importantes ont été réalisées; notamment la place des anticoagulants dans la prévention des accidents vasculaires cérébraux chez les dialysés (Dr Manish Sood), les moyens d'augmenter les taux de dons de reins et d'améliorer les résultats des greffes (Dr Greg Knoll), un lien entre les résultats des analyses de sang du nouveau-né et le risque de maladie rénale chez les enfants (Dr Sood), et le lien entre l'hypertension artérielle et le risque d'insuffisance rénale (Drs Sood, Marcel Ruzicka, Swapnil Hiremath, Ayub Akbari, Deb Zimmerman et Brendan McCormick), parmi beaucoup d'autres. Ces avancées sont également soulignées dans notre bulletin mensuel, le Newsflash du CRMR (www.ohri.ca/centres/krc/newsflash.asp).

Le CRMR a encore une fois réussi à obtenir d'importantes subventions provinciales et nationales. Le gouvernement de l'Ontario (ministère de la Recherche, de l'Innovation et des Sciences) a décerné au Dr Dylan Burger un prestigieux prix de nouveau chercheur pour ses travaux sur les effets des microparticules circulantes sur les vaisseaux sanguins et les cellules rénales du diabète. Le Dr Burger a été l'unique lauréat de ce prix à l'IRHO, ce qui témoigne de l'importance de la grande qualité de ses recherches. Le Dr Kevin Burns a reçu une subvention de cinq ans des Instituts de recherche en santé du Canada (IRSC) pour poursuivre ses recherches sur les traitements à base de cellules pour l'insuffisance rénale aiguë. Le Dr Burns et son groupe ont montré que chez les animaux souffrant d'insuffisance rénale subite, l'administration par voie intraveineuse de minuscules vésicules («exosomes») isolées à partir de

cellules «progénitrices» du sang de cordon humain protège de manière significative des lésions rénales et permet une récupération plus rapide. Grâce à cette subvention, son laboratoire espère découvrir les mécanismes par lesquels ces exosomes protègent les reins, pour ensuite transférer cette technologie pour une utilisation chez l'humain souffrant d'insuffisance rénale dans un proche avenir. Sur le plan clinique, la Dre Zimmerman a reçu une subvention des IRSC pour le lancement d'un essai clinique axé sur les effets de l'exercice sur la qualité de vie des patients traités par dialyse. Le financement de cette importante étude a été octroyé à l'issue d'une compétition dans laquelle une seule candidature sur 10 avait été retenue. Le Dr Ayub Akbari a reçu une subvention de la Fondation canadienne du rein pour étudier les raisons pour lesquelles certaines personnes atteintes d'insuffisance rénale avancée doivent commencer les traitements de dialyse de façon urgente, sans délai pour ainsi aider où planifier la prise de décision. Le Dr Edward Clark a reçu un financement du Réseau rénal de l'Ontario (RRN) pour étudier les facteurs conduisant au rétablissement de la fonction rénale chez les patients présentant une insuffisance rénale aiguë en dialyse. Le Dr Manish Sood a également reçu une subvention de l'ORN visant à améliorer la compréhension des décisions de fin de vie et du statut de « non-réanimation » chez les patients sous hémodialyse. Le Dr Swapnil Hiremath a reçu un financement provenant de « Lotte et John Hecht Memorial Foundation » pour ses recherches sur les effets des suppléments en potassium alimentaire sur l'hypertension artérielle, un facteur de risque majeur des maladies du rein.

Les étudiants diplômés du CRMR ont défendu avec succès leurs thèses en 2017-2018 : Mme Maddison Turner (laboratoire du Dr Burger) et Mme Randa Haneef (laboratoire du Dr Burns) ont obtenu leur maîtrise en sciences à l'Université d'Ottawa. Mme Naomi Boisvert (laboratoire du Dr Kennedy) a obtenu un doctorat pour son

étude sur le rôle de l'hydrolase-1 C-terminale de l'ubiquitine dans la fonction rénale et la maladie glomérulaire.

Nous recevons un soutien formidable de la communauté à Ottawa. Le souper et gala de la 34e soirée La Serata Italiana / Italian Night du 3 mars 2018 a présenté une « nuit à l'opéra » et a permis de récolter 50 000 \$ pour le CRMR. Nous remercions Anna Monteduro, Mario Frangione et tous les membres du comité organisateur de la Nuit Italienne d'avoir organisé ce grand gala, ainsi que la Fondation de L'Hôpital d'Ottawa (FHO) pour leur aide et leur soutien. Lors du dîner, Matthew Spence, étudiant diplômé du CRMR (laboratoire du Dr K. Burns), et le Dr David Massicotte-Azarniouch, stagiaire de néphrologie, ont reçu une bourse CRMR, parrainée par la Nuit Italienne et la Fondation du rein du Canada. M. Spence étudie les moyens par lesquels les exosomes des cellules progénitrices du sang de cordon peuvent cibler de manière sélective les reins blessés (et non d'autres organes) afin d'exercer leurs effets bénéfiques. Le Dr Massicotte-Azarniouch s'intéresse à une infection appelée « vasculite à ANCA », qui peut provoquer une insuffisance rénale subite. Il mènera des recherches pour découvrir les facteurs de risque de cette maladie débilitante, ainsi que les traitements optimaux. Les bourses du CRMR soutiennent la formation de ces excellents étudiants et financent leur participation et leurs présentations lors de réunions nationales et internationales.

Plus de 4 500 \$ ont été collectés pour soutenir le CRMR lors de la 8ème édition du projet de remise en forme « Vivre ses défis » le 29 avril 2018. Cet événement réunissait des coureurs et des marcheurs de tous les groupes d'âge, ainsi que des patients et des membres de leur famille. Nous remercions chaleureusement Mme Marie-Eve Chainey, présidente de l'événement, Dre Zimmerman, et tous les membres du comité pour leur

travail acharné et leur dévouement à cette cause importante.

Le 18 septembre 2017, le 14ème tournoi de golf annuel du CRMR au club « The Meadows » a attiré plus de 130 golfeurs et a permis d'amasser 30 000 \$ pour soutenir la recherche sur les maladies du rein. Mme Marie-Eve Chainey (Vivre ses défis), notre conférencière invitée pour la soirée, a raconté son expérience en tant que greffée de rein. L'organisation de l'événement a été une nouvelle fois dirigée par M. Sam Karkache, son comité de bénévoles et la Fondation de l'Hôpital d'Ottawa. Nous remercions Sam et tous les membres du comité, notre président d'honneur – une légende du hockey Brian Kilrea, Dean Roberts de TSN 1200, Michael O'Byrne, Urbandale, le groupe CLV ainsi que tous les participants et commanditaires.

Enfin, nous sommes très reconnaissants envers nos donateurs privés, qui ont effectué des dons importants au CRMR au cours de la dernière année et qui serviront directement à soutenir des projets de recherche biomédicale et clinique. Nous remercions également les stagiaires, le personnel de recherche, notre responsable de laboratoire, Mme Gaby Cherton-Horvat, et le personnel administratif (Mme Brittany Hollingsworth et Mme Jennifer Brownrigg) pour leur contribution à une nouvelle année de recherche fructueuse au CRMR. J'espère que vous appréciez la lecture des réalisations de la dernière année, y compris un article spécial sur l'un de nos scientifiques, le Dr Richard L. Hébert!

Cordialement,

Kevin D. Burns, MD CM, FRCPC
Professeur de médecine, Division de néphrologie
Université d'Ottawa et l'Hôpital d'Ottawa
Directeur, Centre de recherche sur les maladies
du rein
Institut de recherche de L'Hôpital d'Ottawa, Université
d'Ottawa

KRC Profile — Dr Richard L. Hébert

Growing up on a farm in the small town of Saint-Jean D'Iberville, QC, Dr. Richard Hébert was more interested in hockey and football than biomedical research. However, a decision to move to Ottawa, and a personal connection played a central role in launching the career of one of the world's leading authorities on kidney tubule function. "I was supposed to study Optometry in Montreal, but I wanted to learn English and so I chose to do my undergraduate studies in Ottawa. I decided to leave, to the great despair of my parents who wanted me to stay nearby". Dr. Hébert arrived in Ottawa in 1971 and after completing studies at the University of Ottawa, he actually worked in the federal government for a time. It was during this time that he recognized his desire to be involved in medical research. So after 4 years in the civil service, Dr. Hébert moved to the Université de Sherbrooke for his graduate studies. Why kidney research? "Because on my mother's side I had two aunts who had kidney disease and at the time there were very few treatment options".

A major turn in Dr. Hébert's career came at the start of his postdoctoral studies. "I was supposed to go to Texas Southwestern University to work with Dr. Harry Jacobson. I wanted to go there because it was in Dallas and the football culture was very appealing! Just before I was set to leave he called me to tell me that he was moving to Nashville, Tennessee. There was no hockey or football at the time, but I really liked Harry and I was able to learn a technique that very few people in the world can do. So I drove my AMC Gremlin down Highway 81 and spent the next 4 years performing microperfusion".

Microperfusion is a technique that measures the function of individual kidney tubules. It is one of the most technically challenging experiments used to study kidney function and is critical to understanding how kidneys work in health and disease. "It took me a year to learn the technique" says Dr. Hébert "to have results that you can repeat and begin to understand". His investment in learning microperfusion paid off as Dr. Hébert published several manuscripts in the world's most prestigious journals including the Journal of Clinical Investigation. Dr. Hébert also kept in touch with scientists in Canada, eventually returning to start his own laboratory in 1990. "I received offers from both McGill and the University of Ottawa, but I wanted to come to Ottawa because they had a core of people working on kidney disease".

Starting a new laboratory can be a challenge to anyone but Dr. Hébert says that the environment in Ottawa was a major factor in his early success. "The person who helped me the most early in my career was Dr. Steven Nadler. He was also working on kidney tubules and we were able to collab-

orate and publish several excellent studies. Unfortunately, a few years later he decided to focus on his clinical nephrology practice but our work together helped launch my career”.

At the same time, Dr. Hébert was increasing his teaching contributions, notably he assisted in founding the francophone stream of medical education at the University of Ottawa. “I was able to combine research along with medical education, which I really enjoy, and administration (Dr. Hébert was Assistant Dean of Admissions in the Faculty of Medicine from 2000-2010). I was able to balance this mainly due to the work of two excellent graduate students: Christopher Kennedy (now himself a Senior Scientist at the KRC) and Rania Nasrallah who were able to do a lot of independent work which opened up time for my teaching and administration. Rania (who is Dr. Hébert’s research associate), in particular has been a real driver of my laboratory’s activities”.

The 1990s also marked a dramatic expansion of kidney research in Ottawa culminating in the formation of the Kidney Research Centre in 1998. “Drs. Kevin Burns, David Levine, and I formed the Kidney Research Centre which was the first centre in Canada devoted entirely to research in the Kidney. And with the help of Chris Kennedy, who joined the KRC in 2001, we received a major grant from the Canada Foundation for Innovation to build a brand new research facility for the KRC. This facility opened in 2003 and I consider it one of the greatest achievements in my career. It really enhanced kidney research in Ottawa”.

Today, Dr. Hébert’s research focuses on sodium glucose cotransporter 2, which is involved in glucose transport in the kidney. “This is a really hot topic! This year, at the American Society of Nephrology Kidney Week there will be two symposia on this. Inhibitors of this transporter are now be-

ing used to treat diabetes and a key question is “What is the effect of long-term use of these drugs on the kidney”?

Outside of the lab Dr. Hébert enjoys long walks with his wife and dog and is an avid car enthusiast. When asked what makes a great car? “The sound of the engine, not so much the speed but the handling, feel and a quiet interior”. He lists a 2020 Porsche 911 Carrera S as his dream vehicle. Hearing him describe the car you get the sense that he has a plan to own one.

KRC Outreach

KRC Golf Tournament

The 14th annual KRC golf tournament held on September 18, 2017 at the Meadows Golf and Country Club was a success, raising more than \$30,000 to support kidney research. The KRC is grateful to the golfers, sponsors, The Ottawa Hospital Foundation, and the organizing committee led by Mr. Sam Karkache. Special thanks to our generous main sponsors, the CLV Group and Urbandale Corporation.

Italian Night

La Serata Italiana continued its tradition of fund-raising and celebration on Saturday, March 3rd, 2018. The KRC joined in celebrating the 34th Italian Night Dinner which raises funds for research and trainee scholarships at the KRC. The dinner was held at the Sala San Marco and featured great food, networking, entertainment and a silent auction. The theme of the 34th Annual gala was "A Night at the Opera," a magnificent evening for everyone that raised more than \$50,000.

Each year two KRC Trainees are awarded the Agostino Monteduro Italian Night Scholarships, on behalf of the Kidney Foundation of Canada. The 2018 awardees were Dr. David Massicotte-Azarniouch and Mr. Matthew Spence. Dr. Massicotte-Azarniouch is a RCPSC Fellow in the Nephrology Program at the University of Ottawa, supervised by Dr. Manish Sood. He has published a number of population-based research studies related to kidney disease during his training. Mr. Spence is a graduate student in the Laboratory of Dr. Burns. Mr. Spence completed an

Photo: Members of the KRC staff and La Serata Italiana organizing committee.

Honours undergraduate project in the lab in 2017, focused on the tissue distribution of intravenously administered exosomes (tiny vesicles derived from cord blood endothelial colony forming cells) in ischemia-reperfusion kidney injury. For his Masters' thesis, he is studying how these exosomes (which protect against kidney injury) selectively target the kidneys.

The KRC is thankful for the tireless efforts of the Italian Night organizing committee in support of research aimed at improving the lives of people affected by kidney disease.

Alive to Strive

The 2018 Alive to Strive race was held Sunday, April 29, 2018 at the Terry Fox Athletic Facility. More than 500 runners and walkers participated in the morning's races. The participants and over 100 volunteers raised over \$21,000. Over the past 8 years, the event has raised more than \$36,000 for the KRC. Thank you to Marie-Eve Chainey (President of the Board of Directors) and the entire Alive to Strive Organizing Committee!

KRC Grant Funding (2017-2018)

Clinical Research Grants

Dr. Edward Clark

Predicting renal recovery in patients requiring outpatient dialysis after acute kidney injury (RECOVER AKI).

Ontario Renal Network (ORN)

2018-2019

\$147,230

Saline versus albumin fluid for extracorporeal removal with slow low efficiency dialysis.

Co-principal-investigator with Dr. S. Hiremath

University of Ottawa Department of Medicine

2017-2019

\$47,988

Dr. Swapnil Hiremath

Potassium for hypertension.

Lotte & John Hecht Memorial Foundation

2018-2022

\$286,540

Blood pressure measurement: Should technique define targets?

The Physicians Services Incorporated Foundation (PSI)

2017-2018

\$45,000

Dr. Greg Knoll

A research program to improve patient outcomes in kidney transplantation.

Canadian Institutes of Health Research

2015-2022

\$2,099,382

The Canadian national transplant research program: Increasing donation and improving transplantation outcomes.

Canadian Institutes of Health Research

2013-2018

\$13,850,000

Dr. Manish Sood

Bridging the gap between patients and physicians in clinical decision-making: An online mobile app to examine dialysis patients and physicians' acceptable levels of risk and benefit for anticoagulation to prevent strokes with atrial fibrillation.

SPOR Network in Chronic Disease (CIHR)

2017-2019

\$99,000

Dr. Manish Sood (continued)

The risk: Benefit trade-off of newer anticoagulants for heart disease in patients with CKD.

The Ottawa Hospital Academic Medical Organization (TOHAMO)

2018-2019

\$98,939

Understanding advanced care directives and do not resuscitate status in hemodialysis patients in Ontario (The Do No wRong Study).

Ontario Renal Network (ORN)

2017-2018

\$120,000

Characteristics and clinical outcomes of polycystic kidney disease patients with end stage kidney disease in Canada.

Otsuka Pharmaceuticals

2017

\$22,460

Dr. Deb Zimmerman

iOS APP to assist end stage kidney disease patients with phosphate self-management.

The Ottawa Hospital Academic Medical Organization (TOHAMO)

2017

\$93,330

A simple exercise program for patients with end stage kidney disease to improve strength and quality of life: A feasibility study.

Canadian Institutes of Health Research

2018-19

\$50,490

Basic Research

Dr. Dylan Burger

Microparticles in diabetes.

Early Researcher Award—Government of Ontario, Ministry of Research, Innovation and Science

2018-2023

\$140,000

Microparticles in diabetes.

Canadian Institutes of Health Research

2017-2022

\$284,676

Extracellular vesicles in vascular and renal disease.

Canada Foundation of Innovation

2015-2020

\$173,953

Dr. Kevin Burns

Endothelial progenitor cell exosomes and MicroRNA transfer as therapy for acute kidney injury.

Canadian Institutes of Health Research

2017-2018

\$100,000

Endothelial progenitor cell exosomes and MicroRNA transfer as therapy for acute kidney injury.

Canadian Institutes of Health Research

2018-2023

\$742,050

Exosomal transfer of MicroRNA-486-5p in acute kidney injury repair.

Kidney Foundation of Canada

2017-2019

\$100,000

Listening, Learning, Leading: Canadians seeking solutions and innovations to overcome chronic kidney disease (Can-SOLVE CKD).

Canadian Institutes of Health Research

2016 to 2021

\$12,500,000 (Cell therapy in diabetic nephropathy trial: \$2,000,000)

Dr. Richard Hébert

The renal PGE2/EP3 system affects kidney concentrating mechanisms and diabetic polyuria.

Kidney Foundation of Canada

2016-2018

\$100,000

Investigators—Invited Presentations

Dr. Ayub Akbari

Proteinuria in pregnancy.
Grand Rounds, Brown University
December 2017
Providence, Rhode Island, USA

Hemodialysis and pregnancy.
Grand Rounds, Hamad Medical Centre
March 2018
Doah, Qatar

Dr. Ann Bugeja

Obesity in living kidney donation.
Division of Nephrology, Department of Medicine, Queen's University
June 2018
Kingston, ON

Dr. Dylan Burger

Insights into glomerular injury from podocyte microparticles.
International Podocyte Conference
May 2018
Montreal, QC

Vascular and renal assessment with membrane-derived microparticles.
University Health Network Division of Nephrology Seminar Series
February 2018
Toronto, ON

Microparticle biology and diabetes.
CanSOLVE AdDIT and iCARE Working Group Meeting
February 2018
Toronto, ON

Careers in academia: Basic science.
Canadian Hypertension Congress - Trainee Day.
October 2017
Toronto, ON

Microparticles in the diabetic microenvironment.
Cell Biology WIP Seminar Series - University of Ottawa
September 2017
Ottawa, ON

Dr. Kevin Burns

Cell therapy in kidney disease.
Nephrology Rounds, Centre hospitalier de l'Université de Montréal
April 2018
Montreal, QC

Dr. Kevin Burns (continued)

Effects of endothelial progenitor cell-derived exosomes in experimental acute kidney injury.
Basic Science Conference, Centre hospitalier de l'Université de Montréal
April 2018
Montreal, QC

Dr. Edward Clark

'Dry this patient out!': Fluids and the use of RRT for 'de-resuscitation.'
Annual Meeting, Canadian Society of Nephrology
May 2018
Vancouver, BC

Dr. Swapnil Hiremath

Learning from other fields in medicine to improve Nephrology education.

Spring Clinical Meetings, National Kidney Foundation
April 2018
Austin, Texas

Why and how should I tweet? Social media for healthcare professionals.

Annual Canadian Association of Nephrology Administrators Summit
May 2018
Vancouver, BC

Dr. Chris Kennedy

Role of mechanical stress in diabetic injury.
American Society of Nephrology, Basic Science Symposium
November 2017
New Orleans, Louisiana

Dr. Greg Knoll

ECD/DCD: Evaluation of the marginal kidney donor.
CST/Astellas Canadian Transplant Fellows Symposium CST-CTRMS Joint Scientific Meeting,
September 2017
Halifax, NS

Transplantation research: Tips for a successful academic career.

CST Research FiTS, CST-CTRMS Joint Scientific Meeting
September 2017
Halifax, NS

Recipient candidacy: Who is a candidate for a kidney transplant in 2017?

American Society of Nephrology Annual Scientific Meeting
November, 2017
New Orleans, USA

Dr. Manish Sood

ASN highlights ESRD: Back to school.
March 2018
Mumbai, India

Dr. Manish Sood (continued)

Updates on the CAN-DOPPS.

DOPPS Symposium, the American Society of Nephrology

November 2017

New Orleans, USA

Dialysis modalities in Canada.

The Canadian Agency for Drug and Health Technology Evaluation (CADTH)

November 2017

Ottawa, ON

Should we anticoagulate kidney disease patients with atrial fibrillation to prevent stroke? A nephrologist's perspective.

Visiting Professorship, Department of Medicine Grand Rounds, QEII Health Sciences Centre

November 2017

Halifax, NS

Recent Nephrology studies from the Institute of Clinical Evaluative Sciences.

Visiting Professorship, Nephrology Grand Rounds, QEII Health Sciences Centre

November 2017

Halifax, NS

Outcome of Aboriginal peoples with kidney disease in Canada.

DEVENIR Foundation 15th Annual Meeting

October 2017

Montreal, QC

Dr. Deb Zimmerman

Elevated Phosphate levels should be lowered towards the normal range.

CME for Nephrologists

April 2018

Toronto, ON

Awards and Distinctions

Recipient	Year	Award
Dr. Dylan Burger	2017	Chair of the Membership Committee for Hypertension Canada.
	2018	Deputy Editor of Hypertension News, International Society of Hypertension.
	2018	Named member of the organizing committee for the 2018 International Society of Hypertension Scientific Meeting, Beijing, China.
Dr. Chris Kennedy	2018	Interim Director of Awards and Prizes for Excellence in Education and Research for the Faculty of Medicine, University of Ottawa.
Dr. David Massicotte-Azarniouch	2018	2018 Agostino Monteduro Italian Night Scholarship
Mr. Matthew Spence	2018	2018 Agostino Monteduro Italian Night Scholarship

Visiting Speakers

Date	Scholar	Title of Presentation	Seminar
Oct. 12 2017	Dr. Michael Walsh MD, FRCPC, PhD Associate Professor, Division of Nephrology McMaster University Hamilton, Ontario	<i>Aldosterone and cardiovascular morbidity and mortality in end-stage renal disease.</i>	Nephrology Grand Rounds
