

Help us Advance Respiratory Syncytial Virus (RSV) Vaccine Research in older Adults.

- RSV is a highly contagious virus that can cause infection in the lungs.
- RSV is seasonal and typically occurs during winter months.
- RSV is a leading cause of serious respiratory tract disease in older adults.
- There are currently no licensed RSV vaccines.

The Clinical Investigation Unit is participating in an RSV vaccine research trial and are looking for volunteers aged 60 years and older. If you or someone you know are interested in participating in the trial and would like more information, please contact the research team:

CIU@TOH.CA or 613-737-8899 x72310

Other Criteria for participation will be discussed with the study team.
